

Group Project #1

1. Combine Facebook and AWS into a unified authentication and access control mechanism
2. host an initial login page which redirects to a lead-in page, page #1
3. page #2 is linked from page #1, by a simple link
4. page #2 is a photo upload page, which enables a photo upload. The photo should upload, then display on the page, once uploaded
5. once the photo displays on page #2, a link should appear which redirects the user back to page #1, should they wish
6. page #2 should contain persistent login capabilities, enabling a user who has already logged in to get photo upload capabilities

Each team member must contribute to requirement 1.
