CIS 311 Memo:

How to submit your ASP.NET final project

Please do the following things to document your ASP.NET project.

Each of the ten sections of the tutorial should be complete, and visible. Your grade is calculated based on your percentage of tutorial pages are complete. Hence, in your document:

1. Copy / paste all program code into a single .docx document. Entitle each file name and separate onto a new page for each file you coded.
2. Create an insert screenshots of each web page you created during the tutorial. Do not document the steps you took; only your finished pages.
3. Save the combination of code and screen shots in one document. Do not screenshot code, and do not take phone photos of each UI.
4. Save your .docx to .pdf format is possible.
5. Upload to your class dropbox, listed in announcements (Blackboard), sent via email on Thursday, May 31.

Document is due at the close of the final exam, and may be submitted without attending the final.
